

SUPPLEMENT

Supplementary Table 1. Comparison between Patients with HS and Normal Subjects

Parameter	HS (n = 36)	Normal Subjects (n = 21)	<i>P</i>
APR, °	107.83 ± 17.09	109.48 ± 14.24	0.712
ATN, °	151.77 ± 7.62	148.06 ± 9.58	0.117

Data of measurements were compared between 36 patients with HS and 21 normal subjects, and there was no significant difference. 57 subjects were put into one group to expand the sample size of the controls. APR = angle of the petrous ridge, ATN = angle of the trigeminal nerve, HS = hemifacial spasm
